EDUCATION

Stanford University

Sep 2022 – Jun 2026

B.S. Computer Science, Depth Track: Artificial Intelligence | Minor in Mathematics

SKILLS

Languages: Python, TypeScript/JavaScript, Java, C/C++, SQL

Frameworks/Backend: FastAPI, Pydantic, REST APIs, React, Next.js, Node.js, Playwright, service-layer architecture

AI/ML: PyTorch, scikit-learn, LLM applications, agent workflows, evaluation harnesses, retrieval and ranking, recommender systems, NLP, classification, clustering

Tools/Systems: Git, Linux/Unix, POSIX, Docker, automated testing, CI/CD, debugging, concurrency

EXPERIENCE

Software Engineering Intern, AI/Data Platform | Chimeboard

Jul 2026 – Sep 2026

- Built the ranking and retrieval layer of a content discovery pipeline: AI-generated queries, Apify API ingestion, normalization, evidence-preserving deduplication, and relevance ranking over live third-party data.
- Improved generation quality by injecting retrieved real-world candidates, measured at +0.222 on the deterministic score with non-overlapping distributions across every run.
- Built the offline evaluation system behind that result, pairing deterministic ranking metrics with an LLM judge over human-reviewed gold labels, plus a variance harness separating real gains from run-to-run noise.
- Grew automated coverage to 245 tests across ranking, duplicate merging, backward compatibility, and live provider integrations, and replaced several ad hoc query flows with one reusable abstraction.
- Owned components end to end with the founding team, from design discussion through code review to production merge.

Research Intern | Stanford University, Jasper Ridge Biological Preserve

Jul 2023 – Aug 2023

- Prototyped GPS error correction with grid-based smoothing and heuristic filters, cutting median site error from ~12m to 7m on a 200-sample test set, and digitized 3K+ herbarium specimens with standardized metadata.

CS LaIR Tutor | Stanford Society of Latinx Engineers

Apr 2024 – Mar 2025

- Tutored 50+ students in CS106B fundamentals, including recursion, data structures, algorithms, debugging, and edge-case reasoning, through weekly one-on-one and small-group sessions.

SELECTED PROJECTS

TRM Scam Investigation Agent

Sep 2026

TRM Labs Engineering Challenge (48 hours)

- Built an autonomous Playwright agent that investigated 160 potentially malicious websites, classifying each as scam or not and extracting BTC, ETH, and TRC-20/ERC-20 stablecoin addresses.
- Kept address extraction deterministic with regex matching plus Base58Check and EIP-55 validation, reserving the LLM for classification so no address could be hallucinated.
- Hardened the agent against hostile sites with isolated browser contexts, blocked downloads and service workers, prompt-injection guards, and Docker, with concurrent runs checkpointed to JSON.

StarReady: AI Behavioral Interview Practice Web App

Spring 2026

CS 194W, Software Project

- Built a full-stack conversational AI platform in a 4-person team over 10 weeks, with real-time mock interviews, resume-aware question generation, and structured post-interview feedback.
- Developed backend data models, REST API routes, and service-layer components across 3 core modules, with evaluation checks on structured outputs to catch LLM regressions.

Automatic Mood-Conditioned Symbolic Music Generation

Fall 2025

CS 229, Machine Learning

- Built a mood-conditioned MIDI generation pipeline in PyTorch over 108K+ MIDI files, encoding emotion and genre metadata into token sequences.
- Compared LSTM and Transformer models, scaling from 2K to 55K train/validation sequences and reaching 0.845 validation macro-AUROC.

AR Navigation System with Snap Spectacles

Spring 2025

DESIGN 284, Designing for Extended Realities

- Engineered on-device AR turn-by-turn navigation in Lens Studio with route parsing, plane detection, 3D arrow anchoring within 5 cm of drift over 10 m, and GPS-to-world-space updates under 1 second.

ACTIVITIES & ACHIEVEMENTS

- **Co-Creator, Web Platform Society (The Loading Spinner Blog)**, Jun 2025 – Aug 2025: shipped a Next.js blog and MDX pipeline that cut publish time from ~30 to under 10 minutes, reaching 5K+ readers.
- **Senior Corporate Liaison**, Stanford Society of Latinx Engineers (SOLE), Mar 2025 – Mar 2026
- **Stanford VPUE STEM Fellows Nominee**, nominated for a Stanford undergraduate research fellowship
